

COOPERATIVE ECONOMIC INSECT SURVEY REPORT

Glenn A. Salsbury, Survey Entomologist

Report 14, Volume 55

November 15, 2007

Listed below are wood boring insects collected and identified during the exotic pest surveys of 2007. Most of those listed only feed in dying and dead wood. Nearly all of those listed were taken in canopy traps. Very few were taken in Lindgren traps.

BARK BEETLES 2007

Monarthurm fasciatum
Xylosandrus crassiusculus
Corthylus punctatissimus
Ips grandicollis
Ips latidens
Ips avulsus-----state record. Feeds in dead and unthrifty pine wood.
Scolytus multistriatus
Scolytus rugulosus
Scolytus muticus
Phloeosinus dentatus
Xyleborus celsus
Xyleborus ferrugineus
Xyleborus xylographus
Trichidias atomae
Hypothenemus sparsus
Hypothenemus rotundicollis
Hypothenemus crudiae
Ambrosiodmus rubricollis
Hylastes tenuis
Hylurgopinus rufipes
Hylocurus rufipes
Hylocurus langstoni
Pseudopityophthorus pruinosis
Phloeotribus frontalis
Xyleborinus saxeseni
Pseudothysanoes rigidus
Pseudopityophthorus minutissimus

FLATHEADED BORERS 2007

Acmaeodera pulchellus
Agrilaxia flavimana
Agrilus arcuatus
Agrilus celti
Agrilus egenus

Agrilus fallax
Agrilus l. lecontei
Agrilus paracelti
Agrilus otiosus group
Anthaxia viridifrons
Anthaxia fisheri
Brachys aerosus
Chrysobothris adelpha
Chrysobothris p. purpurovittata
Chrysobothris sexsignata
Chrysobothris n. sp. will be shawnee when published

LONGHORNED BEETLES 2007

Saperda imitans
Saperda lateralis
Saperda discoidea
Saperda tridentata
Saperda puncticollis
Strangalia luteicornis
Purpuricenus humeralis
Enaphalodes rufulus
Dorcas wildii
Distenia undata
Stenocornus cinnamopterus
Typocerus sparsus
Goes tigrinus
Goes pulverulentus
Leptura emarginata
Neoclytus approximates
Neoclytus acuminatus
Xylotrechus colonus
Eburia haldemani
Elaphidion mucronatus
Rhopalophora longipes
Oeme r. riaida
Dorcaschema cinereum
Dorcaschema alternatus
Dorcaschema nigrum
Urographus triangularis
Acanthocinus obsoletus
Leptura pictus
Megacyllene caryae
Knilliana c. cincta
Euderces pini
Neoclytus j. jouteli

Leptostylus transversus
Ecyrus d. dasycerus
Psenocerus supernotatus
Liopinus alpha
Liopinus mimeticus
Astyliidius paravus
Phymatodes amoenus
Anelaphus parallelus
Urgleptes sp.
Parandra b. brunneri
Hyperplatys aspersa
Anelaphus parallelus
Anelaphus pumilus
Anelaphus villosus
Ataxia hubbardi
Eupogonius pauper
Heterachthes quadrimaculatus
Lepturges confluens
Liopinus misellus
Monochamus carolinensis
Psyrassa unicolor
Sternidius variegatus
Typocerus v. velutinus
Oberea tripunctata
Parandra polita
Smodicum cucujiformes
Parelaphidion incertum

Two insects of note that were reported earlier are the New York weevil and the large yellow underwing. Both of these were found in the state for the first time this year.

The above specimens will be place in the collections at Kansas State University.

EMERALD ASH BORER: None were detected in Kansas. A list of firewood importers is being maintained and it is also noted what species of wood are being brought into the state.

Contributors to this report: Ely, Salsbury, Stiers, Hilbert, Copeland, Buhler, Sanders, Clarkson, McRae, Bright.
